Unit 1 Coding Project **Name: _____** **Total:_____/40**

Criteria	5 – Excellent	4 – Proficient	3 – Satisfactory	2 – Needs Improvement	1 – Incomplete	Points
Code Organization	Code is neatly structured with clear method definitions and calls. Proper indentation and comments make it easy to read.	Code is structured well, with minor formatting issues.	Code works but is somewhat messy, making it hard to follow.	Code is disorganized and difficult to follow with multiple formatting issues.	Code lacks structure and is almost impossible to understand.	____/5
Calculator Class	The Calculator class has instance variables, constructors, and all methods created correctly.	There is one issue with the Calculator class.	There are two to three issues with the Calculator class.	There are four issues with the Calculator class.	There are five or more issues with the Calculator class.	____/5
Math Methods	Uses Math.abs(), Math.pow(), Math.sqrt(), and Math.random() effectively in calculations, and the outputs make sense.	Uses all four math methods correctly, but with minor inefficiencies.	Uses three Math methods correctly, but one is used incorrectly.	Uses only one or two Math methods correctly.	Missing required Math methods.	____/5
StringManipulator Class	The StringManipulator class has instance variables, constructors, and all methods created correctly.	There is one issue with the StringManipulator class.	There are two to three issues with the StringManipulator class.	There are four issues with the StringManipulator class.	There are five or more issues with the StringManipulator class.	____/5
String Methods	Uses .length(), .substring(), and .indexOf() effectively, with no logical errors.	Uses all three methods, but one is slightly misused.	Uses all three methods, but some have inefficient implementation.	Uses only one or two methods correctly.	Missing required String methods.	____/5
Main Class	The Main class correctly obtains user input, creates the correct objects, and correctly calls on all of the methods in the classes.	There is one issue with the Main class.	There are two to three issues with the Main class.	There are four issues with the Main class.	There are five or more issues with the Main class.	____/5
Creativity and Problem-Solving	Goes beyond the basic requirements, adding creative functionality or efficient solutions.	Includes slight enhancements beyond the base requirements.	Meets the basic requirements but does not use optimal solutions.	Meets minimum requirements but lacks problem-solving effort.	Does not meet minimum requirements.	____/5
Reflection Questions	Answers all four reflection questions with in-depth explanations and examples.	Answers all four questions with mostly complete responses, but lacks depth.	Answers all four questions, but responses are short or missing key details.	Answers some questions, but responses lack clarity or completeness.	Reflection is incomplete.	____/5
