Unit 1 – Objects and Classes
PA 1: My First Programs

Getting Started

We are going to walk through the steps to create your first program! We will be using the CodeHS Sandbox to code and run our Java programs.

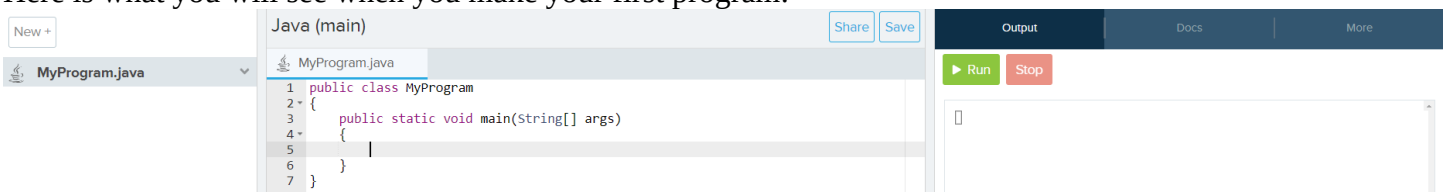

Step 1: Go to https://codehs.com/explore/sandbox. We will NOT be joining a section, but instead will be utilizing the "Sandbox", a place where you can code freely.

Step 2: Use your Student Google Account to signup as a student learner (you will NOT be joining a section).

Step 3: On your dashboard, you will see a button that says "+Create New". Click on that to make your first program!

Here is what you will see when you make your first program:

Each class is represented with a file in java. The file name must match the class name and have the ".java" extension.

Program #1

Write code to ask the user to enter their name and print the following message:

```
Hi <name>, welcome to AP CSA!
```

Where `<name>` is replaced with the name input by the user.

Program #2

Write a program that asks the user for three names, then prints the names in reverse order.

Sample Run:

```
Please give me name one: Emmarie
Please give me name two: Diana
Please give me name three: Augustus

Augustus, Diana, Emmarie
```

Program #3

Your weight is actually the amount of gravitational attraction exerted on you by the earth. You will not weight the same on the other planets, because their gravitational attraction to you is different. Write a program that accepts the user's weight (in pounds) and then prints off how much you would weight on each planet.

A table of planet multipliers are below (for example, Mercury's multiplier is 0.4, meaning if you take your weight times 0.4, you will get your weight on Mercury.

Planet	Mercury	Venus	Mars	Jupiter	Saturn	Uranus	Neptune
Multiplier	0.4	0.9	0.38	2.3	1.1	0.92	1.2

Program #4

Write a program that starts with seconds (provided by the user) and then displays that value converted to full hours, minutes and seconds.

Sample Run:

```
Give me any amount of seconds: 356442
99 hours, 0 minutes, 42 seconds.
```
