Unit 1 – Using Objects and Methods Name: _____
HW 2

1) Given the following code segment:

```
int age = 16;
String name = "Cindy";
```

Write a line of code that correctly prints: Cindy is 16 years old.

2) Match the variables with the values that they can hold.

_____ `String value;`	A. 5
_____ `int count;`	B. 3.5
_____ `double num;`	C. "Science is fun"
_____ `boolean thing;`	D. false

3) There are 3 mistakes in the class below. Circle or highlight them and explain what the mistake is and how to fix it.

```
public class Example
{
     public static void main(String[] args)
     {
          System.out.println(Welcome to the show.);
          String question;
          question = Are you ready to start?;
          System.out.println(question);
          int amount = 3.5;
          System.out.println("There will be " + amount + " shows.");
          double cost = 5;
          System.out.println("The show will cost " + cost);
     }
}
```

4) Place a “T” for a true statement and “F” for a false statement on the lines below.

_____ a) All Java methods must be contained in a class.

_____ b) The `static` keyword in the main method is optional.

_____ c) An integer can be stored in a double variable.

_____ d) A double can be stored in an integer variable.

_____ e) A class can start with either an uppercase or lowercase letter.

_____ f) A String is a primitive data type.

_____ g) Declaring a variable is allocating space in memory for it, but not giving it a value.

_____ h) Every statement in Java must end in a semicolon.
